

## NW-DA1001 AL Drill Pad

## SAVE TIME & MONEY EVERY HOLE

Fiberglass molded grating is a strong mesh grating panel used as floor grates that are corrosive and chemical resistant.

The large open surface area of molded grating means water does not build up on walking surfaces.

Fiberglass Molded Grating weighs much less than steel grating, and is therefore easier to install. The high resin content of molded FRP grating provides excellent corrosion resistance, unlike steel which will rust and require continual repainting, cleaning or replacement.
